**Assignment : Create a WEB portfolio using HTML and CSS**

Hello , This is my first WEBSITE as a Moringa School student. I'm excited to embark on this journey and hoping to learn as much as possible.

This is a thank you letter to any future user wishing to collaborate or share feedback on WEB related solutions.

I used CSS and HTML with a blend of bootstrap tags to compliment my first website portfolio.

I used online tutorials to learn how to navigate through the terminal and maximized my Teaching Master classes.

By Learning Commands I was able to navigate through Git and Github.

I would like to walk you through on how I started my Project.

First , I made a vision of How i would like my WEbsite to appear.

I outlined my 10 Branches

- Introduction
- Services
  - 1.E-commerce
  - 2.User interface
  - 3.WEB creativity
  - 4. Learn more button
- Why programming
- Languages
- About :
  - Thought process
  - Complex thinking
  - Career interest
- About me
- Contact / feed back section
- Footer
- License information

I later created a Why i decided on programming Section

Then I added an inspiration Mood board for my Portfolio.

I added an "about me" section

I added a contact section

Added a footer and licence information

I used commands like  
git config user.name "i entered my github user name "  
Git config user.email "email address"  
Cd desktop  
Mkdir portfolio  
Ls portfolio  
Mkdir img  
Mkdir css  
touch index.html  
touch style.css  
Git status  
Git add .  
Or git add "file"  
Git commit -m"message"  
Git log  
Git push origin master
